Reference No. **90-ZCA-03**

UPDATE: Sep. 30, 2021

REVISED : 201811

ISSUED: 201603

Because of regional requirement and/or variety of component(s), there are specification differences on the same model name.
 The specifications are coded and incorporated with machine serial number for easy and accurate recognition.
 There are 2 types of serial numbers; namely 8-digit and 12-digit.

On 8-digit serial number, the first 2 digits represent the specification code.

Specification code: 38

On 12-digit serial number, ignore the first 4 digits include alphabet, and the next 2 digits represent the specification code.

4 digits include alphabet

Specification code: 20

The model name in this publication are described with specification code as CS-501SX (38), SRM-420ES (38), HCA-265ES-HD (38), PB-2520 (38), etc.

Followings are specification codes and the meanings.

- 30: Russian
- 33: Turkish
- 35: EU before Emission directive became effective
- 36: EU Emission directive ST1
- 37: EU Emission directive ST2
- 38: EU Emission directive ST5
- 02 to 15: North American
- 26: Latin American
- 20, 22, 24, 25: Other than the above

--- Symbols used in carburetor adjustment table ---

-  : PI (Proportional integral) controller installed model
-  : Use Tachometer PET-1000R to read engine speed
-  : See NOTE below
-  : With shield
-  : Without shield
-  : Use Load adapter #91156

1. Special tool for carburetor adjustment

Key	Part Number	Description	Reference
1	897802-33330	Tachometer PET-1000R	Measuring engine speed to adjust carburetor
2	91019	Limiters cap tool	Removing and installing Limiter cap
3	91020	Limiters plug tool	Removing and installing Limiter plug
4	Y089-000095	Carburetor adjustment tool	Adjusting Carburetor
5	X603-000070	D-shaped tool (M)	Adjusting Carburetor
6	91159S	Short type D-shaped tool (S)	Adjusting Carburetor

To adjust carburetor, standard tools may be required such as Phillips-head screw driver and/or flat-blade screw driver.

2. Limiter cap and limiter plug

On some models, limiter caps or limiter plug(s) have been installed on L (and H) mixture needle(s) of several types of carburetor. When adjusting carburetor, these limiter caps or limiter plug(s) should be removed.

To remove and install limiter caps or limiter plug(s), follow the procedure in SERVICE MANUAL Ref. No. 400-09 "CARBURETOR ADJUSTMENT".

IMPORTANT: In the country where an Emission directive/regulation is enforced, limiter caps or limiter plug(s) must be installed on L (and H) mixture needle(s) after adjusting carburetor, to comply with Emission directive/regulation.

3. Limiter cap and limiter plug reference chart

	Reference number	Part Number	Shape		Reference number	Part Number	Shape
Limiter cap	C1	A259-000030		Limiter cap	C6	P005-001530	
	C2	125329-09860			C7	A259-000050	
	C3	125329-39030			C8	125329-08560	
	C4	P003-000010			C9	A259-000040	
	C5	P005-001520			Limiter plug	P1	A259-000000
			P2	P005-001270			
			P5	A259-000060			

4. Verify clutch engagement speed for safety

After adjusting carburetor, verify clutch engagement speed. If it is less than 1.25 times the idle speed, adjust the idle speed by turning Throttle adjust screw (TAS) counterclockwise.

C4	P003-000010	
C7	A259-000050	

a		Screwdriver 2 mm
b		Screwdriver 2.5 mm
d		D-shaped (L)
e		D-shaped (M)

--- Initial settings ---

H & L mixture needles: Turn H and L mixture needles CW until lightly seated, then turn both mixture needles CCW.

TAS: Turn screw CCW until its tip no longer touches the throttle plate. Then turn screw CW until its tip just comes into contact with the plate again. Finally, turn the screw CW for the respective number of rotations.

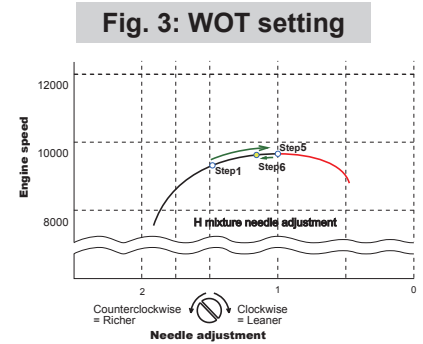

* Turn TAS clockwise until lightly seated. Then turn TAS counterclockwise.

*1 If clutch engages during adjustment, reduce engine speed by turning TAS CCW until clutch disengages and then redo step 2.

*2 Must make adjustments with guide bar and chain provided with product.

--- Initial setting ---

H & L mixture needles: Turn H and L mixture needles CW until lightly seated, then turn both mixture needles CCW.

* Turn L mixture needle counterclockwise until a clicking sound is heard. Then, screw the needle CW for the respective number of rotations.

** Size of fixed main jet - there is no H needle adjustment.

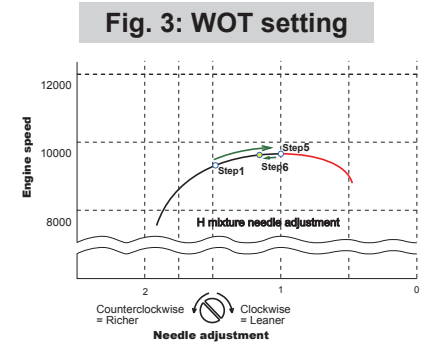

TAS: Turn screw CCW until its tip no longer touches the throttle plate. Then turn screw CW until its tip just comes into contact with the plate again. Finally, turn the screw CW for the respective number of rotations.

* Turn TAS CW until its head touches boss. Then turn TAS CCW.

*1 If clutch engages during adjustment, reduce engine speed by turning TAS CCW until clutch disengages and then redo step 2.

--- Initial setting ---

H & L mixture needles: Turn H and L mixture needles CW until lightly seated, then turn both mixture needles CCW.

* Turn L mixture needle counterclockwise until a clicking sound is heard. Then, screw the needle CW for the respective number of rotations.

** Size of fixed main jet - there is no H needle adjustment.

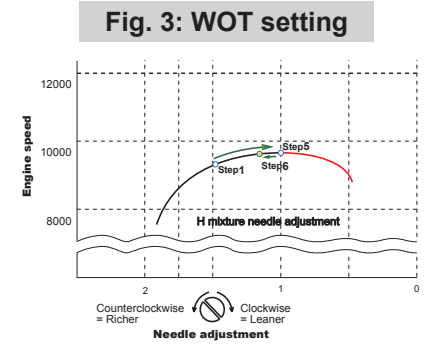

TAS: Turn screw CCW until its tip no longer touches the throttle plate. Then turn screw CW until its tip just comes into contact with the plate again. Finally, turn the screw CW for the respective number of rotations.

* Turn TAS CW until its head touches boss. Then turn TAS CCW.

*1 If clutch engages during adjustment, reduce engine speed by turning TAS CCW until clutch disengages and then redo step 2.
